

So, you've already got your own website. That's great! (and if you don't even have one yet, boy, do I have an infographic to show you)

But, does your website...

Offer a killer user experience that keeps people coming back

Look and feel clean, minimal, and beautiful

Tell a compelling and human story that moves people to take action

Pop up in Google and answer the questions your visitors have

Keep your visitors safe and inspire confidence in your brand

If you answered no to any of those five questions, it may be time to consider a website redesign. Let's break this down a bit, shall we?

Here are the five things that go into making an amazing small business website:

User Experience

Design

Content

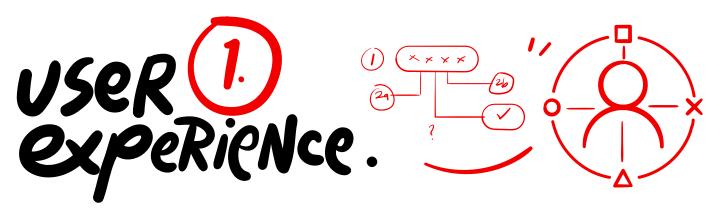

SEC

Security

Let's take a look at these one by one

This section, right here, is the **#1 most overlooked** and neglected aspect of small business website design. Everything, and I mean everything, about great web design comes down to one thing: user experience.

We are bombarded by information on a daily basis. Our attention spans have shrunk so much that we actually have a better chance of holding the attention of a goldfish. (I'm not making this up, it is now a statistical fact.)

If your visitors aren't having a crazy memorable experience when visiting your website, they won't come back. And they definitely won't buy whatever it is you're selling.

If you want to know whether your website puts your user first, and leaves a lasting impression, put it face to face with these **16 questions:**

Your 16 Steps User Experience Checklist 🗸

Ш	your site? (The purpose must be clear within a few seconds.)	font size, color contrast.)
	Do you have a clear call to action on each page?	Is a logical site map available? (it's ok to say you don't know, I didn't either)
	Is your website 100% responsive and optimized for mobile devices?	Do you have a clear and easy to use feedback/contact option? Do you have a contact form?
	Does your website make you look like a credible expert?	Do you have an instant chat option?
	How many clicks does it take to get to the	Do you use transparent pricing?
	CTA (Call to Action) of your website?	Do you have a search feature?
	Does any part of your site use Flash? ✓ If yes, burn it with ✓	Are you using any annoying popups?
	Do clickable items clearly indicate that they are clickable?	Are you using any annoying ads?
	Is your website stupid-easy to navigate?	Does your website have as little content as possible to powerfully convey your story?

Here's the thing about website design: it doesn't have to be complicated. So many professional web designers pour their heart and soul into creating a piece of art worthy of hanging in the Louvre.

And that's why website design often costs so damn much.

Modern website design needs to be simple, clean, minimal, and beautiful. It needs to convey a clear and powerful message, without overcomplicating things.

And, most importantly, your website needs to tell visitors **exactly** what they need to do.

Use this 23 point checklist to make sure your website passes the wonderful design test:

Checklist to Having a Beautifully Designed Website

Ш	appealing? (i.e. 🔥)		and proper formats?	
	Do you have a modern, sexy logo?		Are your images all 100% mobile responsive?	
	Is the logo prominently placed?		Does your website contain elements designed to	
	Is your critical content all "above the fold"? (meaning, can your visitor get the gist of your message without scrolling down)		encourage repeat visits and virality? (i.e. a contest, newsletter, tell-a-friend feature, downloadable toolbar, etc)	
	Is your home page easy to digest in 5 seconds?		Does your website work in multiple browsers and operating systems?	
П	Do you make sure not to use a splash page?		If you use ecommerce on your site: Is it super-dead-simple to buy your stuff and checkout?	
	Is your navigation menu clear and easy to navigate?			
	Do the colors used align with your brand?		Do you have high quality images of your products?	
	Are the color choices visually accessible?		Can you accept credit card payments? And securely?	
	Is the design audience appropriate?			
	Are the fonts easy to read on various screen resolutions?		Do you have fast and affordable shipping options?	
	Does every page have at least some text in the content?		Do you display customer product reviews? Is it a freaking delight to buy stuff from you?	

If user experience is the skeleton, and design is the muscle, then content is the heart and soul of your website.

Your content needs to move people. It has to make them feel things. Your words, images, videos, and sounds need to come together to tell a compelling and human story.

In short, you need to be a great story teller.

Does your tagline make your company's

I can't tell you how many websites nail the user experience and design, only to fall completely flat on content. And I don't blame them. Creating this type of content is an art.

If you're wondering whether or not your current website has powerful and engaging content, use this 30 point checklist to decide for yourself:

Is your website's copy succinct but informative?

Questions Checklist to Determine How Interesting Your Content Really Is

				• •
	Do you combine text, images, graphics, and video to tell a compelling story?			Does the copywriting style suit the website's purpose and 'speak' to its target audience?
				Are bodies of text broken into easy to read chunks?
	Does the content meet user needs, goals, and interests?			Does the content make use of bulletpoint lists?
				Is the content readable at a Grade 6 level?
	Is the content timely and relevant?			Is text broken into small, readable chunks and highlighted using headings, sub-headings?
	For how long will the content be useful?			Does the text emphasize features where appropriate
	When should it expire?			to assist in skimming?
	Has its usefulness already expired?			bes the contrast between text and background color ake it easy to read?
	Is the content understandable to customers?	Within articles, are there links to more detailed		
	Is the content organized logically & coherently?	explanations of subjects?		planations of subjects?
	Does the content contain factual errors, typos,		Do	you avoid using industry jargon?
	or grammatical errors?		Do	you have published written testimonials?
	Do images, video, and audio meet technical standards, so they are clear to the visitor?			Do you have video testimonials?
	Does the content seem to have a style?		Do	you update your content regularly?
	If so, does the content adhere to it consistently?			ave you integrated your social media accounts and intent?
	Do you use attractive stock photos that people won't realize are stock photos?			it easy to share your content on social media with aring icons?
			Do	you have a Help/FAQ page?

SEO has changed a lot. Google is constantly evolving their algorithms to give more importance to, you guessed it, the **user experience**.

Gone are the days where you merely stuffed your website with keywords, submitted it to a few big directories, and called it a day.

It is possible to get on the first page of Google for pretty much anything. It just comes down to how much time and money you're willing to invest. (If you Google fast web design, guess who pops up? (2))

Of course, you have to start with the fundamentals. Use these 25 steps to ensure that you've set yourself up for SEO success:

Review This Steps Checklist If You Want Your Site to Rank in Google

Have you researched the keywords you want your website to rank in Google for?	Are 'alt' tags in place on all images?
Is your website content properly optimized for search engines?	Do those alt tags incorporate your target keywords?
Is essential text emphasized?	Does your website site load quickly? (should be less than 5 seconds)
Are the title tags relevant?	Especially for mobile users?
Is the title text presented in H1 headers?	Are all links (internal and external) valid and active?
Are outbound links reliable and contextually related?	Are links labeled with anchor text that provide a clear indication of where they lead?
Does the content follow search engine optimization (SEO) guidelines, such as using keywords, without sacrificing quality in other	Does your site link to authoritative sources?
areas?	Is your website free from server-side errors?
Are your URLs optimized for search engines?	Is there a site map available?
Do your URLs incorporate target keywords?	If you were researching your content, would you find your website helpful? Would you link to it?
Do they use simplified link structures? www.rapidweblaunch.com/socialmedia/facebook instead of www.rapidweblaunch.com/marketing/?type=socialmedia&networ= facebook)	Is your website integrated with Google Analytics?
Do your page title tags clearly indicate what the	Do you have any high quality links back to your website?
page is about? Have your images and graphics been	Have you listed your website on major local listings sites?
compressed to the smallest size possible?	

As the world continues to move everything online, and with major hacks plastering headlines on a weekly basis, it's never been more important to ensure your website is secure.

If you're selling stuff on your website, this is simply non-negotiable. You need to have these 9 security features in your website:

9 Questions You Need to Ask Yourself If You **Want Your Website** to be Secure

Does your website have any obvious security flaws?
How resilient are your website's forms to special characters?
Do you use Captcha for all of your forms?
Are private pages password protected?
Is customer data stored online?
If yes, is this database appropriately safeguarded against external access?
Does your website have an SSL certificate?
If your website requires personal info to be entered, does it have HTTPS protocol installed?
Do you have a Privacy Policy displayed? (especially if you collect data, email, names, and web analytics tracking cookies)?
